ITALIAN PRIDE!

PLAY ITALIAN

Since 2009, MOSCONI have been manufacturing, exclusively in Italy, amplifiers, DSP and electronic devices for the car audio market through the cooperation of a skilled team of people with more than 20-year experience in this field. Its qualified R&D department, the selection of components and with scrupulous specific tests on every single product bring MOSCONI items up to high quality standards and advanced technology. They are able to integrate with original installations of cars improving and transforming them into hi-end level ones.

QUALITY CERTIFIED

MOSCONI

The awards and prizes that have been assigned to MOSCONI highlights during these years by authoritative European journalists attest its full value.

EUROPEAN In-Car Amplifier 2017-2018 MOSCONI GLADEN PRO 5|30

This debut amp from Mosconi's new PRO series suggests more good things are still to come from the brand. Boasting five independent channels of power - the first stereo pair provides 85W, the second pair 170W while the final channel uses a Class D amp to pipe a substantial 600W to the subwoofer. Maximum flexibility is ensured thanks to the inclusion of separate active crossovers in all channels or, alternatively, all crossovers can be bypassed to adapt the input parameter for use with Mosconi's DSP.

EUROPEAN In-Car Integration 2016-2017 MOSCONI GLADEN DSP 8T012 AEROSPACE

A major turning point in the development of integration processors, the Mosconi GLADEN DSP 8T012 is undoubtedly the star of today's market. A powerful routing procedure enables the most complex of installations and handles eight analogue inputs and twelve outputs, plus one digital input and two digital outputs. By processing at a native sample rate of 192kHz/24-bit, exceptional audio quality is ensured through every step in the chain. Moreover, the Mosconi GLADEN DSP 8T012 also features intelligent control, its AtOM/Auto-fade trigger Option Mode technology automatically detecting the source and selecting the necessary compensation.

EUROPEAN In-Car Smart Upgrade 2015-2016 MOSCONI GLADEN PICO 2

Time is money. With the MOSCONI GLADEN PICO 2 you can save both while still dramatically improving the sound quality of the OEM sound system in your car. It may be hard to believe, but this tiny box (which fits easily into a breast pocket) delivers test-proven 80W of pure power into each of its two channels, which is more than many amplifiers much bigger in size can provide. More importantly, the PICO 2 can be installed almost anywhere inside the dashboard in a matter of minutes with no need for drills or screws. Never before in the history of car audio has it been possible to upgrade the sound quality so quickly, so simply and with such impressive results.

EUROPEAN In-Car Amplifier 2014-2015 MOSCONI GLADEN D2 100.4DSP

The MOSCONI GLADEN D2 100.4 DSP has everything you would expect from an in-car amplifier - except for size. This is an unbelievably small unit with output that belies its dimensions, as four channels of 100 Watts each would be more than enough for even a big amplifier. This amplifier comes with a powerful digital processor packed into the same tiny case, which allows the D2 100.4 DSP to be the heart of a sophisticated and high-quality sound system. In addition to conventional connections, this unit has wireless Bluetooth and optical input. Control for the processor can be managed wirelessly using the optional Bluetooth module, or via USB. The term 'smart amp' has not yet been coined, but if it were this would be a perfect example.

EUROPEAN In-Car Streaming Solution 2013-2014 MOSCONI DSP_AMAS

The MOSCONI DSP_AMAS is an add-on module for the MOSCONI DSP 6to8 processor. It offers high bit rate, high quality audio music streaming capability to your DSP 6to8 equipped car audio system from any Bluetooth equipped music-streaming device such as a phone or tablet. Using A2DP protocol with EDR extension, audio of any file type (eg. FLAC, Ogg, Apple Lossless etc.), is transmitted straight into the digital signal path thus providing high quality interference-free sound. The MOSCONI DSP_AMAS when combined with the DSP 6to8 processor integrates easily into any factory system without sacrificing any of the car's safety or comfort features.

EUROPEAN In-Car Integration 2012-2013 MOSCONI GLADEN DSP6T08

Need a sound improvement that fits anywhere? The MOSCONI GLADEN DSP6to8 might be the right machine for you. It connects easily to aftermarket head units as well as to any factory system. It can handle any flat or pre-filtered signal thanks to its fully adjustable input mixer. It features all the tools needed for digital sound processing, and with its 8 channels it is suitable for virtually any application. The MOSCONI GLADEN DSP-6to8 can be connected to many external sources, including optional solutions for digital inputs and Bluetooth audio streaming. Analog level control and automatic head-room management secure optimal conditions for the digital processing, resulting in the best possible in-car sound experience.

EUROPEAN In-Car Amplifier 2010-2011 MOSCONI AS 100.4

The AS 100.4 is definitely Italian as demonstrated by its quality and style. This elegantly engineered four-channel class AB amplifier includes all the features you would expect from an amplifier of this class plus really unique features such as a slot for preconfigured vehicle specific filter modules offering equalization and sound stage enhancement. This amplifier's design strikes a perfect balance between tradition and innovation, exceeding the highest expectations of the audiophile.

NEXT LEVEL SOUND QUALITY

MOSCONI

GLADEN PRO

From the achieved experience with the lines ZERO, AS, ONE, the new reference for performance and sound quality was born.

Pure design object. Its curves made of bent aluminium and its punched plates feature its unique and innovative look.

The sole use of audiophile components, a circuit optimized for Start & Stop, the Direct-DSP functionality to bypass the signal processing to reach the external DSP directly. All the paths controlled by AT-Mega microcontroller.

The PRO range is the new global reference for amplification.
